King (County of) WA

Update to credit analysis

Summary

[King County, Washington](#) (Aaa stable) benefits from a large and wealthy tax base that includes the [City of Seattle](#) (Aaa stable). Although the coronavirus pandemic significantly disrupted economic activity in the region, the Puget Sound remains the economic engine for the [State of Washington](#) (Aaa stable) and is supported by multi-national businesses in technology, aviation, retail, and consumer goods. Pandemic-driven revenue softness and increased costs for measures to address the pandemic's health and economic effects have been offset by substantial federal government support, primarily through the CARES Act and American Rescue Plan. Given the county's historically strong financial management team, we anticipate the county's long-term financial results will remain solid. The county's debt and pension liabilities are manageable and supportive of the county's strong credit profile.

Exhibit 1

Tax base continues to grow, albeit more slowly

Source: King County, WA

Credit strengths

- » A large and wealthy tax base with a highly educated population
- » Strong financial management team
- » Manageable debt and pension liabilities

Credit challenges

- » Moderate exposure to economically sensitive revenue that are currently weak due to the coronavirus pandemic
- » Pre-pandemic maturation of the service area leading to slower revenue growth and increasing service costs

Rating outlook

The rating outlook is stable. Although the coronavirus pandemic has had a significantly negative economic impact on the region, the county maintains strong underlying fundamentals, including a highly educated population and solid infrastructure; recent indicators suggest economic conditions are improving, a trend we expect will continue as vaccinations increase and broader business and social activity return to normal. The county's tax base will remain strong and that the county's financial management team will ensure the county's financial profile remains healthy.

Factors that could lead to an upgrade

- » Not applicable

Factors that could lead to a downgrade

- » Significant, protracted downturn in the local economy and tax base
- » Sustained deterioration of the county's financial position
- » Material growth in the county's fixed costs, including pension, OPEB, and debt service

Key indicators

Profile

King County spans Seattle, a major city and economic hub of the Northwest, and a large share of the Puget Sound area. The county serves a large population approaching 2.2 million residents which amounts to almost one-third of the State of Washington's population.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moody's.com for the most updated credit rating action information and rating history.

Detailed credit considerations

Economy and tax base: coronavirus has slowed strong regional growth, but solid fundamentals remain

Although the coronavirus pandemic significantly slowed the Puget Sound's regional economy, recent economic indicators suggest a recovery is underway, supported by rising vaccination levels and broader economic and social reopening. Additionally, solid underlying fundamentals are expected to sustain the county's long-term credit strength. Prior to the pandemic, the county's economy and tax base, which encompass much of the larger Seattle metropolitan area, was amongst the fastest growing in the nation. Software development and aircraft manufacturing are key sectors, and the area serves as the headquarters or major operating bases to some of the most well-known corporations, including [Amazon.com Inc.](#) (A1 stable), [The Boeing Co.](#) (Baa2 negative), and [Microsoft Corp.](#) (Aaa stable). Struggles at Boeing surrounding the 737 MAX and its decision to move other aircraft manufacturing away from the region to [South Carolina](#) (Aaa stable) have added to the pandemic-driven employment stress in the region, and the region also has a disproportionately high number of jobs that both pay well and can be done remotely, though evidence of economic out-migration has thus far been limited. The area is also home to the [University of Washington](#) (Aaa stable) system's flagship campus, which is additive to the already highly-educated workforce in the region.

Median family income is above average, especially for a large urban area, at 153.1% of the US 2019 estimates from the American Community Survey. Full value per capita, a proxy measure of wealth, is uncommonly high at \$297,001 for a tax base that lacks any material taxpayer concentration. The county's unemployment rate is modestly elevated at 5.4% as of March 2021, but better than both the state and nation and well below the pandemic highs. As the county continues its gradual re-opening, this rate will improve.

The county's tax base is immense with an assessed value (AV) of \$659.5 billion for the 2021 tax year. Despite elevated unemployment rates, property values increased through the pandemic, a trend we expect to continue as economic conditions improve.

Financial operations and reserves: federal support to offset revenue softness and added COVID-related expenses

The county's financial profile is expected to soften very modestly in the 2021-2022 biennium as a result of the coronavirus pandemic, though much of the impact is likely to be mitigated by substantial state and federal aid; in total, the county has or will receive \$1.2 billion from the state and federal governments, including \$437 million from the American Rescue Plan and \$530 million from the CARES Act. The county council has passed seven emergency appropriation bills to cover the pandemic response, with additional appropriations expected throughout the year. Nearly \$450 million had been spent through mid-March.

Unaudited financial results for 2020 show incremental growth in the county's general fund reserve position, with a fairly modest draw forecasted through the end of the biennium (2022). Because of the coronavirus pandemic, sales tax revenue in 2020 declined by -4%, a decline that was substantially better than county managers anticipated last fall, and indications through March 2021 suggest a return to 2019 revenue levels as early as this year. Beneficially for the county its largest source of revenue is property taxes (39.2% of general fund revenue and 38.3% of operating funds revenue in 2019), which under state law can grow by 1% annually plus new growth, providing substantial stability. Other core revenue, including charges for services and other economically sensitive revenue are expected to remain flat.

Given the county's historic performance relative to budget and management's responsiveness to rapidly changing conditions, Moody's anticipates the county to meet or exceed its budgetary expectations in the short-term and maintain a strong financial profile over the longer-term in line with its historic performance.

Liquidity

Liquidity levels are expected to remain healthy. Cash in operating funds was a strong 35.2% of operating revenues as of fiscal 2019, aligning with total fund balance in operating funds. In addition, the countywide investment pool is available to all of the county on a borrowable basis, and any such loans are not required to be repaid within the same fiscal year. The pool's assets were \$7.5 billion as of fiscal 2019 and largely comprises low-risk and relatively liquid US government and agency securities. The county's own portion averages more than 40% of the pool's assets.

Debt and pensions: manageable leverage and low fixed costs

King County's net direct debt burden remains very modest and declined to the equivalent of only 0.2% of 2020 full value and 0.4x fiscal 2019 operating revenues. The debt burden is net of GOLT bonds issued for King County Sewer Enterprise (Aa1 stable), which are self-supported by the enterprise's net revenues.

Fixed costs were low at the equivalent of 6.4% of operating revenues in fiscal 2019, which is favorable compared to norms for local governments and implies strong financial flexibility. Fixed costs include net direct debt service as well as pension and OPEB contributions.

The county's debt plans include additional GOLT issuances in the current biennium of up to \$750 million for land purchases, solid waste and affordable housing. Local voters in November approved a \$1.7 billion in unlimited tax general obligation bonds to finance improvements at Harborview Medical Center that would be issued in annual installments over the next decade, beginning with a \$50 million issuance in Q4 2021.

The county has a commercial paper program with a maximum authorization of approximately \$250 million for the sewer enterprise, with liquidity support provided internally via the county's investment pool.

Legal security

The county's general obligation limited tax bonds are secured by the county's full faith, credit, and any legally available resources and its pledge to levy taxes annually within the constitutional and statutory tax limitations for non-voted debt.

Debt structure

The county's debt load is comprised primarily of \$2.2 billion of GOLT obligations for various purposes, including \$1.03 billion issued for sewer purposes. The county also has \$38.8 million GOULT bonds, and \$8.2 million of lease obligations backed by its GOLT pledge. The county also has \$286.5 million committed for contingent loan agreements related to financing housing projects, and below the \$400 million limit on such guarantees.

The county assigned its GOLT pledge to a relatively small amount of variable rate obligations related to the sewer enterprise, which are funded from the junior lien on sewer net revenues. These are the Series 2017A and B bonds (\$96.4 million outstanding) and the Series 2019A and B bonds (\$148.1 million). The 2017 bonds are supported by a continuing covenant agreement with State Street Lending Corporation that expires in January 2022 and the 2019 bonds have a standby bond purchase agreement with TD Bank, NA that expires in June 2024.

Debt-related derivatives

The county does not have derivative agreements.

Pensions and OPEB

The county's retirement liabilities are favorably low burdens. The three-year average of Moody's adjusted net pension liabilities (ANPL) for fiscal years through 2019 was modest at the equivalent of 1x fiscal 2019 operating revenues or 0.4% of full value. The county participates in various plans of Washington's multi-employer, cost-sharing, and predominantly defined-benefit programs. ANPL is net of contributions made by self-supporting enterprises, such as the sewer utility. The county contributes above its "tread water" amount, or the amount necessary to keep pension liabilities from growing under plan assumptions.

The county's Moody's adjusted net OPEB liability is modest at \$116.5 million, or less than 0.1x operating revenue. The county provides OPEB to qualified retirees through a single-employer, defined-benefit plan that provides various medical benefits like insurance coverage. The county's contributions are made on a pay-go basis and totaled a small \$5.0 million in fiscal 2019.

ESG considerations

Environmental

Environmental considerations are not a key driver of the county's credit profile. The county does have exposure to extreme rainfall events, but other climate risks are more limited, including heat or water stress and sea level rise.

Social

Social considerations are incorporated in our credit view of the county, as reflected in the strong wealth measures and high levels of educational attainment. The coronavirus pandemic is a social risk under our ESG framework, and has had a substantial impact on the county's financial operations, though we expect strong management to act as a mitigant to the credit risks from the pandemic.

Governance

Washington Counties have an Institutional Framework score of "Aa", which is strong. The sector's major revenue source is property taxes. Counties can increase collections 1% over the prior year, subject to state statutory limits on property tax rates. Unpredictable revenue fluctuations tend to be minor, or under 5% annually. Across the sector, fixed and mandated costs are generally less than 25% of expenditures. Fixed costs are driven primarily by debt service and pension costs. Unpredictable expenditure fluctuations tend to be minor, under 5% annually.

The county operates under a Home Rule Charter with an executive-council form of government. The county executive is the chief executive officer of the county and is elected to a four-year term. The county council is made up of nine members elected to staggered four-year terms.

The county's financial position is driven partly by management policies, including a narrow 6% undesignated general fund balance target for its fiscal years 2021-2022 biennial budget, relative to estimated annual revenues. This target conforms to the county's policy to maintain that balance at 6-8%, along with rainy day reserves in supplemental funds. Nevertheless, the county's total reserves in operating funds surpass these levels, and not including borrowable funds from the countywide investment pool that bolster financial flexibility.

Rating methodology and scorecard factors

The US Local Government General Obligation Debt methodology includes a scorecard, a tool providing a composite score of a local government's credit profile based on the weighted factors we consider most important, universal and measurable, as well as possible notching factors dependent on individual credit strengths and weaknesses. Its purpose is not to determine the final rating, but rather to provide a standard platform from which to analyze and compare local government credits.
